Bases de datos Empresa

- La base de datos es para administrar clientes, pedidos, inventario, compras, proveedores, envíos y empleados de pequeñas empresas.

Ordenar resultados basado en una condición

- Ordenar los empleados por Ciudad si el cumpleaños es mayor a 1990 y por código postal en caso contrario.

```
SELECT FirstName "Nombre", LastName "Apellido",  
BirthDate "Fecha Nacimiento", City "Ciudad",  
PostalCode "Codigo Postal"  
FROM Employee  
ORDER BY  
CASE WHEN Birthdate > '1990-01-01'  
      THEN City  
      ELSE PostalCode  
END
```

Nombre	Apellido	Fecha Nacimiento	Ciudad	Codigo Postal
Margaret	Peacock	1969-09-19	Redmond	98052
Nancy	Davolio	1980-12-08	Seattle	98122
Andrew	Fuller	1984-02-19	Tacoma	98401
Janet	Leverling	1995-08-30	Kirkland	98033
Michael	Suyama	1995-07-02	London	EC2 7JR
Robert	King	1992-05-29	London	RG1 9SP
Anne	Dodsworth	1998-01-27	London	WG2 7LT
Steven	Buchanan	1987-03-04	London	SW1 8JR
Laura	Callahan	1990-01-09	Seattle	98105

Cual es la categoria de productos que vende más unidades?

- Cual es la categoria de productos que vende más unidades?

Que realiza la siguiente consulta?

• ?

```
select t.*, t."Venta Total"-t."Venta Descuento Total" as
"Descuento Total" from (
select o.ProductID "ID producto",
sum(Quantity) "Unidades Total",
sum(Quantity*UnitPrice) "Venta Total",
sum(Quantity*UnitPrice*(1-Discunt)) "Venta Descuento
Total" from OrderDetail as o
Group by o.ProductId
ORDER by 4 DESC ) as t
limit 10;
```

Practicar en GoogleColab!!!

The screenshot shows a Google Colab notebook interface. The browser tabs at the top include 'The SQLite Query Optimizer', 'SQL_IV_chinook_db.ipynb', 'Home / Twitter', 'join sqlite - Google Search', and 'SQLite: Joins'. The notebook's address bar shows a Google Drive link. The notebook title is 'SQL_IV_chinook_db.ipynb' with a star icon. The menu bar includes 'File', 'Edit', 'View', 'Insert', 'Runtime', 'Tools', and 'Help', with a status 'All changes saved'. On the right, there are 'Comment', 'Share', and a user profile icon. Below the menu, there are '+ Code' and '+ Text' buttons, and a status bar showing 'RAM' and 'Disk' usage, and 'Editing' mode.

The notebook content includes:

- A small table with one row:

Name
18 rows
- Text: 'Generated by SchemaSpy'
- Text: 'In the above ER diagram, the tiny vertical key icon indicates a column is a primary key. A primary key is a column (or set of columns) whose values uniquely identify every row in a table. For example, `Employeeid` is the primary key in the `Employee` table.'
- Text: 'The relationship icon indicates a foreign key constraint and a one-to-many relationship.'
- Section: 'SQL con Chinook'
- Section: 'Joins'
- Code cell 1:

```
1 # CROSS Join example
2 %%sql
3 select * from album CROSS JOIN Artist limit 5;
```
- Output for Code cell 1:

```
* sqlite:///content/chinook-database/ChinookDatabase/DataSources/Chinook_Sqlite.sqlite
Done.
AlbumId      Title      ArtistId ArtistId_1  Name
1      For Those About To Rock We Salute You 1      1      AC/DC
1      For Those About To Rock We Salute You 1      2      Accept
1      For Those About To Rock We Salute You 1      3      Aerosmith
1      For Those About To Rock We Salute You 1      4      Alanis Morissette
1      For Those About To Rock We Salute You 1      5      Alice In Chains
```
- Code cell 2:

```
[ ] 1 #INNER Join
2 %%sql
3 select * from album JOIN Artist ON album.artistId=Artist.artistId limit 5;
```
- Output for Code cell 2:

```
* sqlite:///content/chinook-database/ChinookDatabase/DataSources/Chinook_Sqlite.sqlite
Done.
AlbumId      Title      ArtistId ArtistId_1  Name
1      For Those About To Rock We Salute You 1      1      AC/DC
2      Balls to the Wall      2      2      Accept
3      Restless and Wild      2      2      Accept
4      Let There Be Rock      1      1      AC/DC
5      Big Ones      3      3      Aerosmith
```
- Code cell 3:

```
[ ] 1 #SELECT ... FROM alumno JOIN curso USING (aid,...)
2 %%sql
```

The bottom status bar shows '0s completed at 9:43 AM'.

Vistas

Vistas

Consultas con nombre

- Las vistas proporcionan una forma de empaquetar consultas en un objeto predefinido.
- Una vez creadas son similares a tablas de solo lectura.
 - `CREATE VIEW nombre_vista AS SELECT consulta`
- Las vistas son dinamicas, cada vez que son invocadas se ejecuta el `SELECT` otra vez
- Alternativamente son llamadas consultas con nombre.
- Usos:
 - Para almacenar consultas frecuentes o complejas.
 - Para crear versiones de tablas mas amigables al usuario (tiempo y fechas).
- `DROP VIEW nombre_vista;` # que pasa con los datos?

Vista de un Join anidado

Ejemplo

- Crear una vista de un join anidado

```
create view join_album_artista_track as select
* from artist natural join album join track
using (albumid)
```

- Como desplegamos los elementos de la lista?

```
select * from join_album_artista_track limit
10;
```

- Como eliminamos la vista?

```
drop view join_album_artista_track;
```

```
[7] 1 %%sql
2 create view join_album_artista_track as select * from artist natural join album join track using (albumid)

* sqlite:///content/chinook-database/ChinookDatabase/DataSources/Chinook_Sqlite.sqlite
Done.
[]
```

```
[8] 1 %%sql
2 select * from join_album_artista_track limit 10;
```

ArtistId	Name	AlbumId	Title	TrackId	Name:1	MediaTypeId	GenreId	Composer

Done.
[]
```

Indices

Indices

- Los indices sirven para optimizar consultas mediante el ordenamiento o indexación de uno o más columnas de una tabla.
 - La idea es encontrar filas sin la necesidad de revisar toda la tabla.
- Los indices requieren ser actualizados una vez que las tablas son modificadas.
 - `CREATE [UNIQUE] INDEX nombre_index ON nombre_tabla (atributo1, atributo2...)`
 - Los indices permiten valores duplicados pero la sentencia `UNIQUE` prohíbe repeticiones.
- Existen algunos estandar para nombrar indices:
 - `CREATE INDEX idx_alumno_nombre ON Alumno (nombre);`
- `DROP INDEX idx_alumno_nombre;` # que pasa con la tabla alumno?
- Las claves primarias?

Indices

Optimización de consultas

- Sin índices, el motor de base de datos está obligado de revisar las tablas completas en cada consulta.
 - Los JOINS son costosos computacionalmente.
 - La idea es encontrar filas sin la necesidad de revisar toda la tabla.
- Cada índice agrega una carga adicional a INSERT, UPDATE y DELETE.
 - Debemos evaluar donde colocar los índices.
- Los índices no se pueden crear en Vistas.
- Como almacena los datos el motor SQL?
- Por defecto, cada tabla es almacenada utilizando una estructura indexada (B-Tree SQLite).
 - A medida que se insertan filas en el B-Tree, las filas se ordenan, organizan y optimizan, de modo que una fila con un ROWID específico y conocido se puede recuperar de manera relativamente directa y rápida.

Permite: búsquedas, inserciones, deleciones y acceso secuencial
 $\text{Time}(n) = O(\log n)$

- Cuando creamos un índice, el sistema de base de datos crea otro B-Tree para almacenar los datos del índice.
- El nuevo B-Tree se ordena y organiza usando la columna o columnas que se especifican en la definición del índice (! ROWID).

Indices

Ejemplo

- Creamos una tabla con 4 x 1000 numeros.

```
create table tbl (a,b,c,d);
INSERT INTO tbl (a, b,c,d)
VALUES
(84,39,78,79),
(182,39,67,153),
(83,166,143,188),
(145,205,380,366),
(317,358,70,303), ...
```

```
1 %%time
2 %%sql
3 select * from tbl where a=29238;
```

```
* sqlite:////content/chinook-database/ChinookDatabase/DataSources/Chinook_Sqlite.sqlite
Done.
CPU times: user 5.2 ms, sys: 0 ns, total: 5.2 ms
Wall time: 7.23 ms
  a      b      c      d
29238 3171  23996 48794
29238 297097 765679 213680
```

```
[12] 1 %%time
      2 %%sql
      3 create index idx_tbl_a_b ON tbl(a,b)
```

```
* sqlite:////content/chinook-database/ChinookDatabase/DataSources/Chinook_Sqlite.sqlite
Done.
CPU times: user 9.09 ms, sys: 32 µs, total: 9.13 ms
Wall time: 22.4 ms
[]
```

```
1 %%time
2 %%sql
3 select * from tbl where a=29238;
```

```
[>] * sqlite:////content/chinook-database/ChinookDatabase/DataSources/Chinook_Sqlite.sqlite
Done.
CPU times: user 3.88 ms, sys: 0 ns, total: 3.88 ms
Wall time: 3.76 ms
  a      b      c      d
29238 3171  23996 48794
29238 297097 765679 213680
```
